

## Datasheet

### Torque Transducer

# DRVL

**27 torque ranges from  $\pm 0 - 0,02$  Nm up to 20.000 Nm  
precise measurement of torque, speed  
and angle of rotation**

### Option base

Alternative fastening option,  
enables simplified attachment!  
Easy to assemble!

Alignment in the longitudinal axis using a keyway,  
oriented and unmistakable installation  
(for example after recalibration)  
by means of parallel pins

### Accessories mounting adapter

Precise peak height adjustment  
to a desired level.  
Hole pattern is the same as option with foot.

### Features DRVL

- contactless signal transmission
- integral signal amplifier
- low moment of inertia
- speed/RPM measurement (optional)
- Angle of rotation measurement (optional)
- Advanced electromagnetic compatibility (EMC)
- adjustable output level for speed- and angle signal (5 - 24 V)
- larger speed range for speed- and angle measurements
- Frequency output  $10 \text{ kHz} \pm 5 \text{ kHz}$  (RS422)
- larger input voltage range (10 - 28,8 V)
- compact dimensions, universally applicable
- Strain gauge technology
- Option base
- Option mounting adapter
- 0.05% linearity error option

Series DRVL torque transducers are suitable for lab and industrial applications because of their small size and multiple mounting options. As supply voltage and output signal are transmitted without contact, the device can operate continuously with low wear and no maintenance.

These transducers are also available with optional speed and angular measurement for a host of applications. The integrated signal amplifier is powered with 10 - 28,8 V DC and outputs an electrically isolated analog signals of  $0 \pm 10 \text{ V}$  and  $10 \text{ kHz} \pm 5 \text{ kHz}$

The standard version has smooth shaft ends, several types are available with optional keyways (see table).

Standard delivery with factory calibration
